

JEFF BARR

LEAD PRODUCT DESIGNER | AI & MARKETPLACE PRODUCTS | 0 TO 1 BUILDER

Product designer specializing in helping growing companies turn ambiguous ideas into intuitive products. I partner with founders, product managers, and engineers to shape product strategy, validate customer needs, and deliver AI, SaaS, and marketplace experiences with measurable business impact.

StyleSeat

Lead Product Designer

San Francisco, CA

2023 - Present

- Led end-to-end UX and product design across the pro-facing side of the business, covering scheduling, payments, business management, marketing and client experience.
- Designed and validated a Deposits feature through beta user research, launching to 30% pro adoption within one month. Appointments with deposits were 82% more likely to be completed, generating roughly \$200K in deposits weekly.
- Led product design for StyleSeat's largest pro-facing investment: a Marketing Suite including AI content creation, custom websites, email and text marketing, and promotions.
- Introduced an AI-powered Social Post Builder that generated 10,000+ posts across 4,000 providers, solving one of the platform's top customer pain points.
- Launched an add-on subscription website platform generating \$16K in monthly recurring revenue and serving 1,600+ businesses.
- Built and maintained the design system, improving consistency across features and reducing design-to-development handoff time.
- Partnered with product and engineering from discovery through implementation, using customer research, LogRocket session reviews, and competitive analysis to identify opportunities and deliver high-quality product experiences.

HealthPocket (Benefytt Technologies, Inc.)

Head of UX / Lead Product Designer

Mountain View, CA

2012 - 2022

- First product designer hired, partnering directly with founders to build the consumer health insurance comparison marketplace from the ground up, including UX and brand identity.
- Partnered with founders and product leadership to shape roadmap priorities, validate customer opportunities, and launch products that helped position the company for its eventual \$32M acquisition.
- Participated in weekly user research and usability testing; research showing 90% of users wanted help choosing a plan rather than browsing independently led to a redesigned Medicare shopping experience that outperformed prior year enrollment numbers at launch.
- Designed accessible, mobile-first quoting, comparison, and enrollment experiences across health, Medicare, and ancillary insurance products for everyday consumers including seniors.
- Built and scaled multiple design systems including a white-label system on Tailwind CSS supporting partner brand customization, improving consistency and reducing iteration time across engineering teams.

EARLIER EXPERIENCE

Rovi Corporation (now TiVo)

User Interface Designer

Designed content discovery experiences for AllMusic and AllMovie, used by millions of visitors globally. Contributed to a major company rebrand and redesigned the corporate website.

Stevie Awards Nominee, Best Interface Design.

eHealth

Lead UX/UI Designer

Led UX for one of the earliest large-scale online health insurance marketplaces during rapid growth and IPO; managed a designer and front-end developer.

Webby Award Winner, Best Insurance Website.
